3. ABSTRACT

EXMR is an ERC20 token. We call it new Monero. EXMR is built on Ethereum blockchain. Aimed to serves same purpose but, in more Fast and secured way. Now users can have a new experience they can use EXMR just like monero, its a best substitute to original Monero, when more people try and discover that our EXMR has a cheaper transactions cost with more privacy under the Ethereum ecosystem, its such fascinating experience when user prefer to use EXMR instead of Monero, our entire growing community are pushing towards Ethereum and Ethereum is one of the best platforms that maintained by doing the constant advancement in technology by providing more privacy, speed and security. Giving other cryptocurrency full control over your transactions is a scarce digital asset. By stored in an Ethereum smart contract, it can be possible by acquired an ERC20 token called EXMR. In future EXMR can also be useful to purchases a digital goods and services. People are spending more time in virtual world and day by day its increasing rapidly, for leisure and work. EXMR is not controlled by a centralized organization. There is no single agent with the power to modify the rules of the shareholders, contents of land, economics of the currency, or prevent others from accessing the world. This document lays out the philosophical underpinnings, technical foundations, and economic mechanisms of EXMR.

3.1 INTRODUCTION

EXMR is an ERC20 token, works under the Ethereum ecosystem and we all know that EXMR is the world's fastest ERC20 token in terms of block generation time and controlling privacy, by implementation of zk-SNARKs with EXMR we works faster and secured in term of speed and privacy. Now people can switch towards a true promising technology, with value increasing over time, through the supported and vanguard represented by an Ethereum's ecosystem.

3.2 MISSION

Our mission is to unite all best tech-together to revolutionize the market and make EXMR one of the most traded and valuable cryptocurrencies. We planned to achieve place under the rank of top 100 cryptocurrency according to market capitalization. Our Bounty System would also gain widespread marketability.

3.3 VISION

We are helping to expand the boundaries of investment possibilities and to encourage regulators to recognize blockchain tools as the new reality in classical financial markets. Ultimately, EXMR aims to be the benchmark for tokenized investment funds and vehicles that invest in traditional investment instruments as well as in emerging distributed economy opportunities.

3.4 THE PROBLEM

In The cryptocurrency market the major problem is transection security, cost of a transaction(fees) and the privacy of each transaction.

3.5 THE SOLUTION

Any business or individual just want a speed, accuracy, convenience, transparency, privacy, low fees, security and control over the transaction and EXMR is implementing collaborative technology with zk-SNARKs so, EXMR will provide all of these solutions.

4. TECHNICAL INFORMATION

- **Why on Ethereum Blockchain**

The Ethereum blockchain is at a high level, work very similar to Bitcoin. Primarily and most importantly, the blockchain consists of a series of blocks with each block containing a pointer to the previous block and an ordered list of transactions. The blocks are secured by proof of work, with the "longest chain" (as defined by total difficulty) defining the set of confirmed transactions and the order in which they must be processed. In order to arrive at the "current state" of the Ethereum blockchain, a node can start from the "genesis state" (a commonly agreed initial state which is included with every Ethereum client) and process every transaction, applying any resulting balance/sequence number/code/storage changes from transaction processing and code execution sequentially. The same process happens in Bitcoin; although Ethereum's emphasis on the "state transition" model of transaction execution is unique (whereas, for example, in Bitcoin, a transaction is often philosophically viewed as spending "outputs" of a previous transaction in the history, not objects in the state), the way that the code works in Ethereum, Bitcoin and other protocols such as Ripple, Dogecoin, etc., is essentially the same.

What Is zk-SNARKs

- EXMR is backed by ethereum Metropolis that adds a new cryptographic tool (zk-SNARKs) before that the same technology was implemented by Zcash. The addition of zk-SNARK technology into Ethereum is another validation, that provide a privacy and auditability and these are important for business and for the economy, and that zk-SNARKs are the premier technology for privacy and auditability.
- We're happy to see the spread of this powerful technology, we're proud to have helped Ethereum with this project, and we're looking forward to seeing what the devs who program The Ethereum World.

It's important to note that the addition of the zk-SNARK technology does not solve the problem, with that we are using additional tools.

- **Created for Anonymity**

Now with Ethereum Metropolis upgrade with the user's privacy function through a new anonymity protocol known as Zero-knowledge proofs. Given that one of the primary reasons why eXMR have grown in acceptance is the ability to give users financial transaction privacy, we believe eXMR Monero is by far the best cryptocurrency at the moment to buy and sell anonymously. Bitcoin is not anonymous anymore. There have been lots of articles of buyers and sellers being busted recently, and this is just the tip of the iceberg.

4.1 EXMR TOKEN

EXMR only created during a single event commenced in October 2017. EXMR aims to create up to 15 million EXMR for sale on ethereum exchange. The maximum number or the total supply of EXMR will be 15 Million (15,000,000). EXMRs being distributed as a airdrop and Bounty to early supporters at a rate of 0: 0.00 USD with the promise to place on exchange to equivalent to ETH down to 100.00: 87.00 USD equivalent in ETH, finishing at the 15 million distributed EXMR mark.

Name: EXMR

Symbol: EXMR

Decimals: 8

Contract Address: [0xc98e0639c6d2ec037a615341c369666b110e80e5](#)

Total Supply: 15 Million

E-XMR.IO

5. XMR vs EXMR

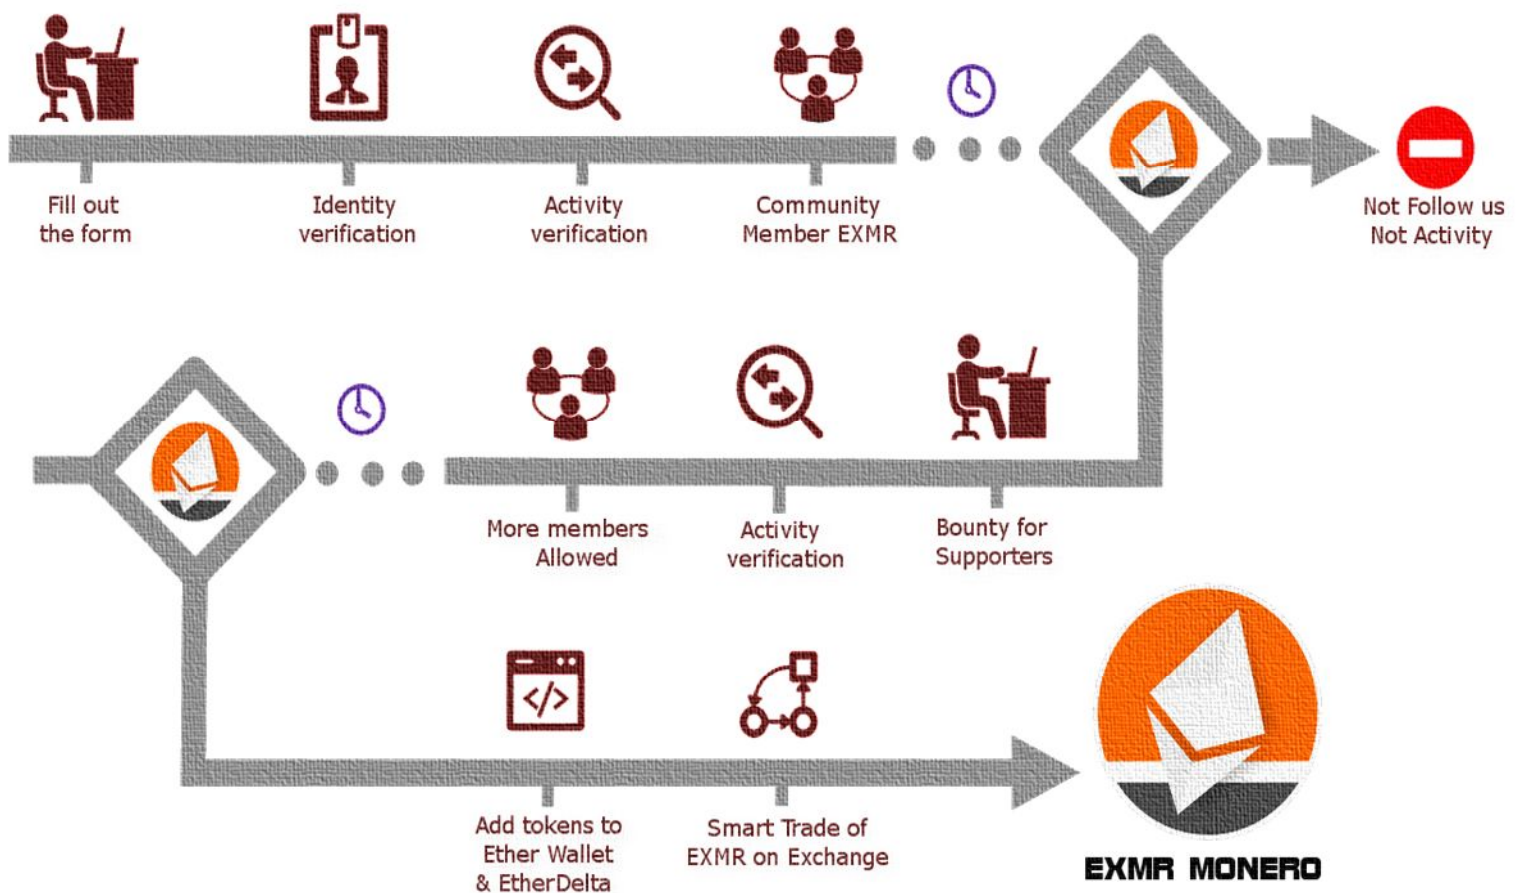

Great advantages we can find within our new EXMR is a block time of 15 seconds, it makes it superior to the traditional Monero, where its block time is 2 minutes, a difference of more than one and half Minutes that is super fast. In terms of total supply there is only 15 million EXMR, while the previous version of Monero has an infinite supply. Within the following comparison table, you will be able to appreciate the great advantages that our new EXMR represents.

Comparative Table:

		
Consensus	PoW	PoW (Soon Pos)
Block Time	2 Minutes	15 Seconds
Privacy	RingCT	zkSNARKs (On Testnet)
Supply	Infinity	15,000,000
Finality	10 confirmations (21 min.)	12 confirmations (3 min.)
Governance	Slow	Fast
Capabilities	Payments Not available yet	Payments+ Smart Contract
Scalins	Lightning Network	Lightning Network + Sharding + Plasma.

6. EXMR TOKEN BOUNTY SYSTEM

We have the most organized reward system, which make our EXMR the most famous among all the ERC20 Token in the market and we dare say that soon we will take a position before many other altcoins, we have a strategy of a bounty dosed within an exclusive group of people in expansion of our own EXMR community, all participant working for the EXMR community and achieving and getting close day by day to the first places in the erc20 market, our EXMR works within the social network system.

7. VALUE TO HOLDERS

The EXMR value will be linked to three determining factors.

First- EXMR will be in the hands of whole EXMR team, those member are connected to a comprehensive system of two-way and exclusive information, where they will work within the EXMR community with assigned tasks, which will help its market value to increase day by day, these tasks and assignments is an exclusive information for the team, which will be provided at the right moment, which we cannot divulge because it represents the life and growth of EXMR and we do not want to be imitated by other false ones that call themselves EXMR.

Second- EXMR will be supplied gradually within the first 6 months following its launch, along this journey, many people will be able to acquire it through the market and assigned tasks, they should follow our instructions and bulletins.

Third- Intend to get each EXMR holder to keep each one, as a treasure and if they offer it to the public, they do it for a price not less than 100.00: 87.00 USD, we also recommend placing sales orders for less than 1.000000000 EXMR

We understand that the value of EXMR will grow gradually in time, making it as a treasured asset with a promising future. Our committed team will always be focused on realizing the right strategies for this achievement.

7.1 ACHIEVEMENTS

We have built a very strong community in a short time, to be on the first place of popularity, within a week we gained more than 1.5K followers on Twitter, 1.3K on Facebook, more than 1.2K members are now connected to EXMR project on Telegram, more than 83 followers on Medium, you can find us on Reddit and Shapeshift with more than 100 comments and positive feedback, for both profiles. And this is just the beginning.

9. WHAT THE MEDIA IS SAYING

- Facebook...

The screenshot displays the Facebook profile for EXMR (@exmrcoin). The page features a blue header with the EXMR logo and the text "E-XMR.IO". Below the header, there are buttons for "Like", "Share", "Suggest Edits", "Learn More", and "Message". The left sidebar contains navigation links: Home, Reviews, About, Photos, Posts, and Community, along with a "Create a Page" button. The main content area shows a "Reviews" section with a 5.0 star rating and 103 reviews. Three reviews are visible, each with a profile picture, name, date, and text. The right sidebar includes a "Community" section with a 5.0 star rating and 1,124 likes/follows, an "About" section with contact information, and a "People Also Like" section with recommendations for "Airdrop Coins" and "Copy Trader".

I think this project is one of the projects that are worth examining among other projects.

I am very confident in this project. the crypto money market is starting to face projects that really want to change something. the first among them is the first open stone.

I know a lot of people will be put off with the "e" nomenclature due to what they've faced or heard about other failed projects but eXMR caught my attention at their telegram channel by the way they moderator there answers almost every repeated noob questions that was thrown at him by more than a thousand people. Always online to answer queries and solve problems. That was enough to get me to invest in this coin. Development team just needs to continue working hard and we investors should also help in spreading the word. Good luck to all of us.

from Kalunomics via /user/eXMRcoin sent 2 days ago
The success of every coin depends mostly 60% on hype and 40% on actual development and innovation. This hype comes from dedicated development team and the level of marketing and awareness being done for the project. eXMR development team so far has exhibited the qualities enumerated above which can be evinced by the way the are conducting the airdrop. That is why I am convinced this project will stand out amongst the rest of other tokens. Keep up the good job and we'll all be at the moon sooner than later. If you're still sitting on the fence, the train will leave the station soon when the token gets listed in coinmarketcap. Get in now while its still cheap.

10. CONCLUSION

EXMR Brings some things new in the crypto world, 'zk-SNARKs' is the new tech that we are collaborating with ERC20 form of Monero and now EXMR become very fast and especially it has "privacy protection, zk-SNARKs" aspect is a core part of our project because Privacy is becoming really big issue now a days and many crypto coins not able to protect our privacy.

Our main proposal is to cover four fundamental aspects, such as: security, privacy, lower transaction cost and speed, those we all want to see in cryptocurrency, our EXMR TOKEN is under the ecosystem of Ethereum, we have the advantage of using the safest platforms, that's very easy to use. Monero's EXMR came to stay with us, we do not intend to move towards the previous one, because everything is changing, old technology replaced by new technology and brings new opportunity to everyone but, who understand the opportunity and grab it, are the real investors in the cryptocurrency world, now time brought you an opportunity to get your hand on EXMR at low cost, on its launching stage.
